

EMPLOYEE LEAVE MANAGEMENT SYSTEM

Mini Project Report

Submitted By: K. Reddy Usha

Roll No: 23AK1A3630

Department: CSE (CIC)

Annamacharya Institute of Technology and Sciences

Abstract

Employee Leave Management System is a web-based application developed using Python Flask. The system helps employees submit leave requests and allows administrators to manage and track leave records efficiently.

Introduction

The project automates the process of employee leave management and reduces paperwork.

Objectives

Provide leave application, tracking, approval management, and record maintenance.

System Analysis

Traditional manual systems are time-consuming and error-prone. The proposed system digitizes leave management.

System Design

Employee -> Web Interface -> Flask Application -> Leave Records -> Admin Approval -> Status Display.

Implementation

Developed using Python, Flask, HTML, CSS, and GitHub.

Testing

The application was tested for leave request submission, record storage, and status display.

Advantages

Easy to use, reduces paperwork, improves accuracy, and saves time.

Conclusion

The system provides an efficient solution for managing employee leave requests digitally.
